

companionminiSolution

The Companion Mini Plesio Pager Solution, currently the smallest monitor of its kind on the market. The digital movement sensor is our most discrete system yet and can be applied in some of the most challenging situations when supporting tonic-clonic seizures. Very simple to install and operate.

Key Features of the Companion Mini solution

- Long Lasting Battery – boasting a life of at least one year.
- Discrete Size – The size of the Companion Mini is significantly smaller than any other monitor or alarm.
- Casing – The Companion Mini has been designed with a Biomaster coated plastic case which is robust and tamper-proof.
- The Companion Mini solution is supplied complete with a pager.
- The pager's rechargeable battery lasts approximately three days between charges
- Failsafe radio with a 450 metre range
- Ultra-sensitive movement sensor
- 3 year warranty
