

pulsecompanion Solution

The Pulse Companion Solution uses a discreet wearable armband sensor to alert caregivers of a potential seizures. When the Pulse Companion identifies heart rate change that could indicate a seizure, an urgent alarm sounds on the caregiver's pager, giving them peace of mind and reassurance during the night.

Key Features of the Pulse Companion:

- Active monitoring for changes in heart rate that are associated with seizures.
- Heart rate thresholds can be personalised to individual users either adult or child.
- Alerts to potential seizures via a Pager
- Armband, Pulse Companion and Pager Link with Failsafe Technology
- Simple to set up and easy to use
- Comfortable wearable armband sensor with 12-16hr battery
- Armband in black as standard
- Free Alert-iT app to check readings and change settings
- Ideal for both domestic and profes-
